TWO BEDROOM DESIGNS

BY SOUL SPACE STUDIOS

Welcome To Soul Space Studios

We are so glad you found us!

We want to let you know a little more about SoulSpace Studios so you can get a feel for the type of people we are, the kind of work we do and how we might fit into dream you have for a beautiful space!

We are a small business located in Gippsland in Victoria. We can transport our work to most parts of Australia and have sent one of our one bedroom homes from one side of Oz to the complete opposite side over in Western Australia. We love that we can bring a dream to life in our little home town and send it all that way to become someones home.

We are passionate about building beautiful buildings for people who truly want something special and who understand the value of what we do. All of our work is customised to suit our clients needs and our building methods use true old-school craftsmanship.

We love the variety that SoulSpace Studios brings us! We work on tiny little 3 x 3 mtr back yard rooms through to three bedroom holiday homes. We have worked on gorgeous amenities blocks for glamping and camping grounds, art rooms for kindergartens, purpose built Airbnb accommodation, home extentions (imagine that over night your house almost doubles in size?!), holiday homes and granny flats.

Every job is unique and that is why our clients are so excited when they recieve their SoulSpace, because it has been 100% tailored to them, their needs, their style and their budget.

Our hope is that one day we will meet and that together we will get to create EXACTLY what you are dreaming of!

With Love,

Bec and Dazz xx

Here at Soulspace Studios, do NOT including the below.

- Soil Tests
- BAL rating
- Transport
- Connection fees
- Footing construction
- External fixtures such as water tanks and solar systems
- Permit fees
- Crane Cost

Things You Might Want To Know

Other Specifics

CONNECTIONS

On all of our work the electrical and plumbing have already been completed internally and are all run to an external point on the building for your local plumber and electrician to connect to your services when the building gets on site. Your split system air conditioner will be mounted internally but a local refrigeration mechanic will need to come on site to connect the outdoor unit and get the system fully operational. Due to transport we are also unable to connect your hot water service so this will be sent with the building and then connected once it is in place.

WHAT BAL RATING CAN WE COMPLY TO?

Our spaces can be built to comply with all requirements of a BAL rating of BAL12.5 through to BAL29 fairly simply. BAL 40 and Flame Zones can also be accounted for but at this level of risk the issues will be more with the other conditions the CFA and local councils need you to abide by. We are happy to discuss the issues that may arise and help you to liaise with your council about site specific details.

GROUND WORKS

The majority of our buildings are placed on concrete strip footings which have been poured 4-5 days prior to delivery. These footings are an engineered design and there are variations depending on your soil classification. At times we have placed our buildings on more of a stump/screw pile style footing if it is required to gain height from the ground level.

INSTALLATION

Most of our buildings are craned from truck to footings as this is the most accurate way to place them. Depending on access and the type of foundations that have been used we can at times deliver on a tilt tray. This is usually only for our very small modules up to 5 x 4mtrs.

Once the module is in place it is chained to the footings.

TRANSPORT

Due to the transportable nature of our buildings we do have restrictions in relation to the road rules and the dimensions that are allowed. Transport rules and cost increase in accordance with the width of the building be moved. Below is a good guide for you to estimate transport costs to your suburb for the size Soulspace you are after.

UP TO 3.49mtrs wide - This size can travel on a truck unescorted by any other vehicle. The cost per KM is approx \$5

UP TO 4.49mtrs wide - This size needs to be accompanied by one escort vehicle. The cost per KM is approx \$8.00

UP TO 5.49mtrs wide - This size needs to be accompanied by two escort vehicles. The cost per KM is approx \$11 (MORE IN NSW due to local laws)

***All of these prices are approximate and can vary depending on conditions set out by local road laws. **When calculating KM's the FROM destination is Heyfield, VIC 3858.*

Things You Might Want To Know

IS A PERMIT NEEDED?

It is a common misconception that transportable/modular buildings come under more lenient rules than conventionally built homes or granny flats. Unfortunately this isn't the case. A building permit is required to place any structure over 10 sqm on your land (or over 20sqm in NSW) ** This is subject to local council legislation and varies from council to council.

Placing a Soulspace Studio on your land will mean that you need to comply with all of the same regulations as a traditional build. This includes full structural drawings, soil test, six star energy rating, BAL assessment (if in a fire prone area) and inspections at the footing, frame and completion stages. Permits are applied for through a private building surveyor who also carries out the inspections required.

PLANNING PERMITS

In some cases you may need to get planning permission from your local council. Usually a granny flat or dependant persons unit is exempt. In most cases a unit going onto a vacant residential allotment is also exempt. Some instances where a planning permit may be needed are

- When your land is within a bushfire management overlay
- When you are wanting to place a secondary dwelling on a property (that will not be used for a dependant family member)
- When you are using the space as an extension to your existing home and it will more than double the size of the building.
- When the land is not zoned correctly for a dwelling

*** In each case we look into the required permits in the preliminary stages*

EXTRA COSTS TO ACCOUNT FOR

Here is a table for you to use to add up the items not included in our pricing

• Planning Permit (if required)	\$ _____
• Building Permit	\$ _____
• Soil Test	\$ _____
• BAL Rating (if required)	\$ _____
• Earth Moving (if required)	\$ _____
• Footing Construction	\$ _____
• Transport	\$ _____
• Crane Hire (if required)	\$ _____
• Connection to services	\$ _____
PLUMBER	\$ _____
ELECTRICIAN	\$ _____
REFRIGERATION MECHANIC	\$ _____
ADDITIONAL COSTS TOTAL	\$ _____

Your local council website will most likely disclose their planning permit application fees on their website under their planning information.

We are able to help with building permit fee information and also footing construction estimates. To calculate transport costs please refer to the information under 'Transport' on page .

Feel free to ask us about any of the items above and how to obtain pricing on any of the items listed above.

Things You Might Want To Know

SIZES THAT WE BUILD

Our studios range from 3 x 3 mtr garden rooms through to 5.45 x 15 mtrs long.

CLADDINGS THAT WE USE

Externally we are well known for our use of Scyon Linea weatherboard and also use all Weathertex cladding products, Colorbond cladding products and natural timber cladding. **We are happy to use any external cladding that suits your taste!**

Our internal cladding choice is mainly VJ lining and this is what we are asked for most. We can also use plasterboard, pine ship lap and ply sheeting. All pricing in our price list is based on Scyon Linea cladding being used externally and VJ lining being used internally.

OUR GLAZING

All of our work comes with double glazed windows and doors.

STYLES THAT WE BUILD

SoulSpace Studios is most well known for our cathedral ceiling designs and hamptons style feel. We can turn our hand to any style though and have completed many skillion style designs, modern/contemporary designs with parapet roof and no eaves as well as gabled roofs with trusses to achieve a flat ceiling inside.

INSULATION THAT WE USE

As a standard we use foilboard under the floor, R2 batts in the walls and R3.4 to R6 all ceilings. The style of the roof can influence the types of insulation we use on each project but more importantly the minimum 6 star energy rating dictates the amount of insulation needed.
